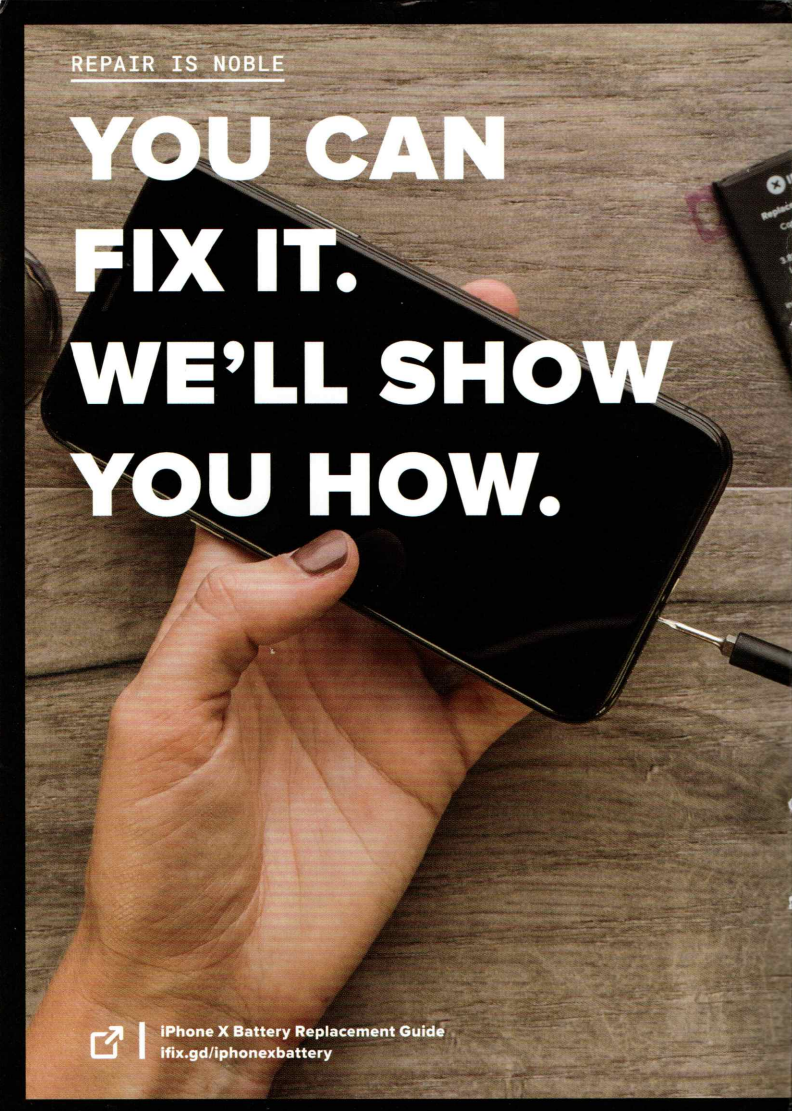
IFIXIT

WELCOME TO THE REPAIR REVOLUTION

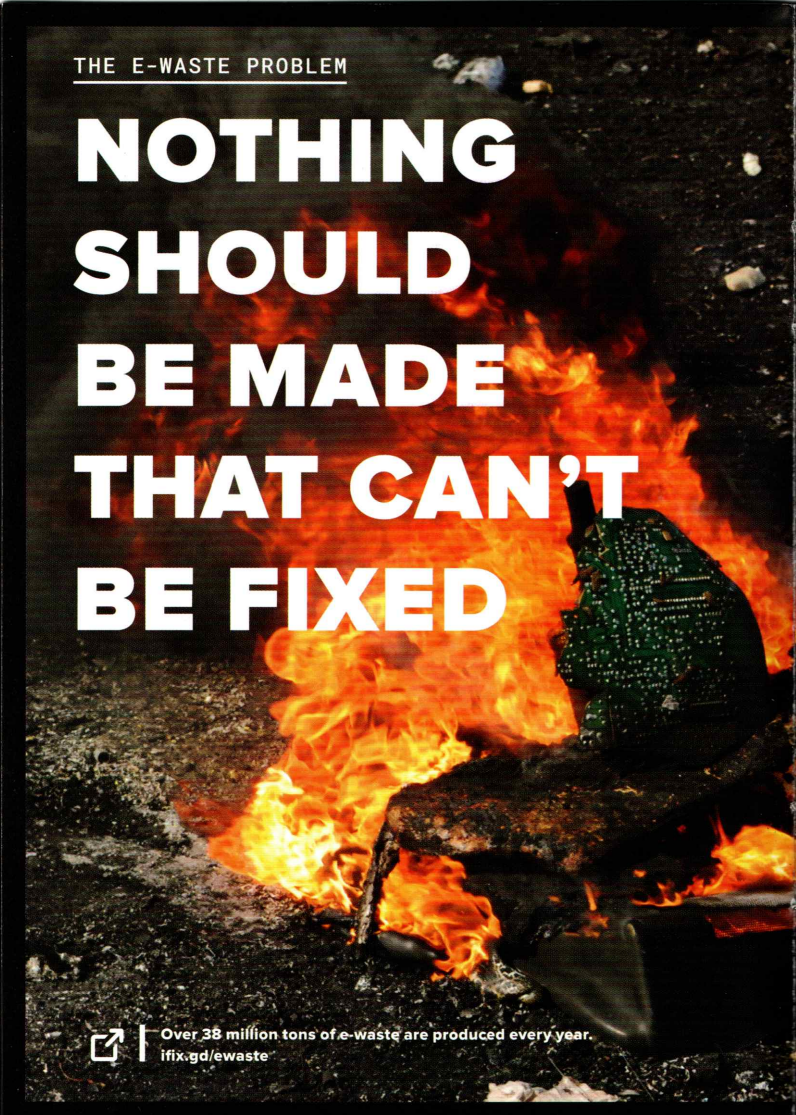


REPAIR IS NOBLE
YOU CAN FIX IT. WE'LL SHOW YOU HOW.
iPhone X Battery Replacement Guide
ifix.gd/iphonexbattery

We're on a mission to empower everyone to fix their stuff.

You don't need to be a genius to repair your things. We have the parts, tools, and step-by-step guides you need to fix thousands of things, all in one place. And our instructions are free and easy to find online, just like they should be.

Repair saves you money and saves the planet. All you need is the gumption to pick up a screwdriver and believe in yourself. We know that you're more than capable—you're built for this.



THE E-WASTE PROBLEM
NOTHING SHOULD BE MADE THAT CAN'T BE FIXED
Over 38 million tons of e-waste are produced every year.
ifix.gd/ewaste

You gotta fight for your right to fix.

We toss computers that could be fixed with a new hard drive and upgrade when our phones just need an inexpensive battery. It's not all our fault—manufacturers intentionally make their products hard to fix by making repair resources hard to access.

iFixit is fighting back by advocating for Right to Repair laws that would require manufacturers to provide the parts, tools, and repair information we need to fix our stuff. We won't stop fighting until repair is easy and planned obsolescence is obsolete.

We will go to the ends of the earth to protect fixers and tinkerers. Join us in the fight!

REPAIR BUILDS RESILIENCE
GROWING LOCAL REPAIR COMMUNITIES
Learn how to start a repair community in your neighborhood.
ifix.gd/communityrepair

Repair shops and local groups rally to fight planned obsolescence.

Free of cost and staffed by volunteers, a Repair Café is a place for locals to bring broken household items and help each other troubleshoot them.

The most popular items at your local repair café? Coffee makers and lamps. Demystifying electricity is a snap for volunteer repair coaches, who will help you solder in a new switch and send you home with a good-as-new light.

Support your local repair shop! Independent shops help build self-sufficient local economies and perform repairs that manufacturers often won't.

Now repair communities are popping up all over the place, thanks to people like Martine Postma, founder of the Repair Café Foundation.

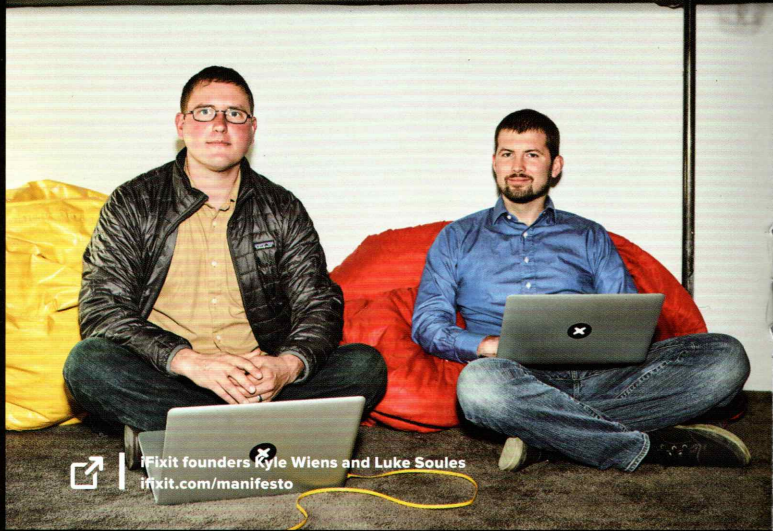
OUR STORY

BUILDING A UNIVERSE OF REPAIR



iFixit founders Kyle Wiens and Luke Soules
ifixit.com/manifesto

It all started with a broken iBook.

It all started in 2003 inside Luke Soules and Kyle Wiens dorm room at Cal Poly, San Luis Obispo. Kyle broke his iBook and couldn't find a repair manual online to fix it. As you might expect from engineering students, they decided to open it up and try to fix it the hard way: by themselves.

Luke and Kyle posted their repair process online, and they kept posting more repairs—until iFixit had more Apple repair information than anywhere else on the internet. Then, they open sourced their guides and invited the community to help them write a repair guide for every thing. Now, iFixit is the global leader in repair.

10 million people

Use iFixit monthly

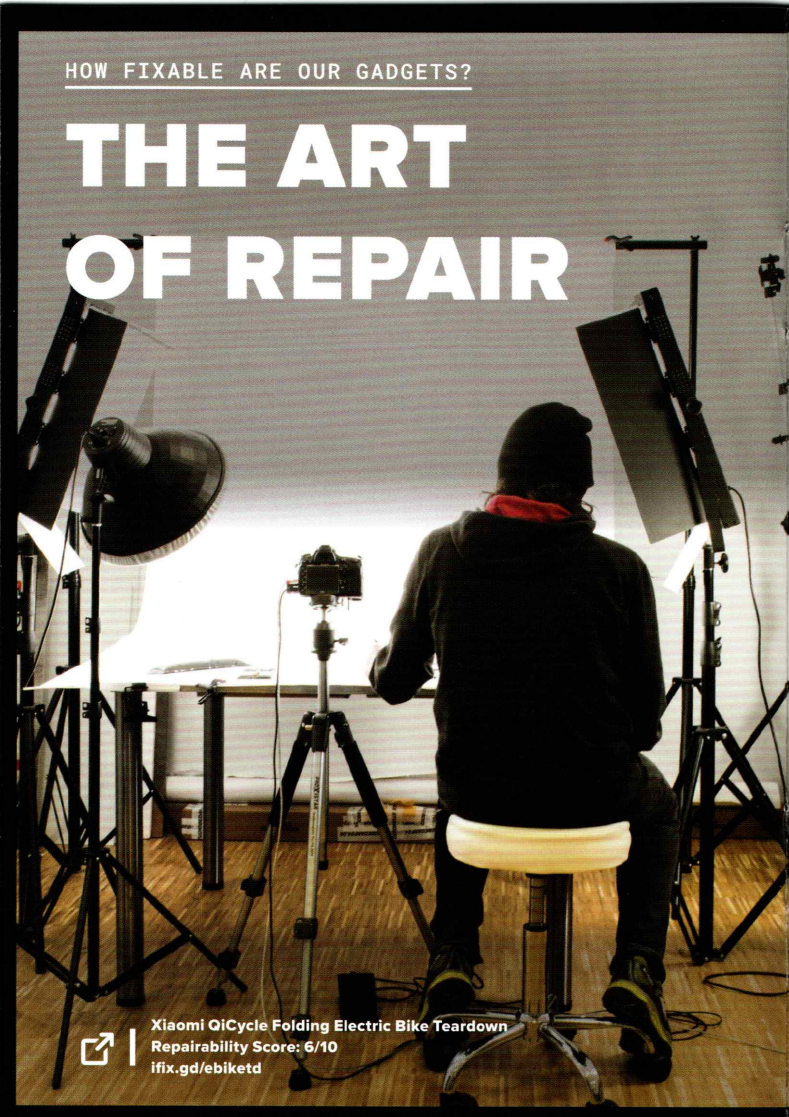
HOW FIXABLE ARE OUR GADGETS?

THE ART OF REPAIR



Xiaomi QiCycle Folding Electric Bike Teardown
Repairability Score: 6/10
ifix.gd/ebiketd

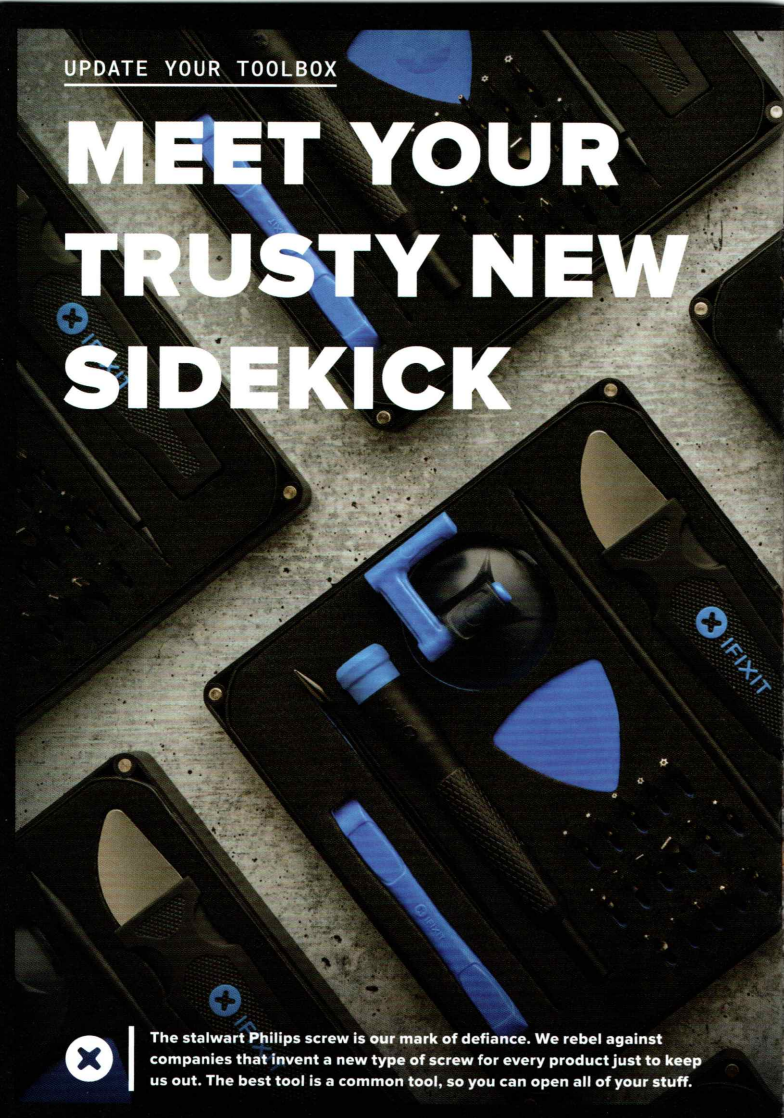
It doesn't end with guides.

We've made a habit out of being the first to take apart the newest gadgets and assess their repairability.

New obstacles, like the tri-wing screws in the Apple Watch, or the stubborn glue in the Microsoft Surface, are no match for our team's persistence and our custom toolkits. Once we figure out how to open a device, we publish the repairability score and step-by-step repair guides so everyone else knows how to do it, too.

UPDATE YOUR TOOLBOX

MEET YOUR TRUSTY NEW SIDEKICK

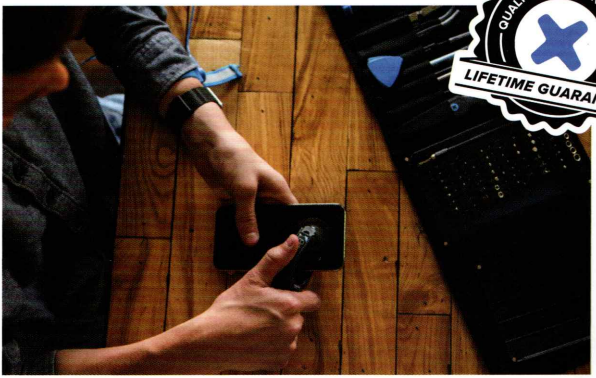


The stalwart Philips screw is our mark of defiance. We rebel against companies that invent a new type of screw for every product just to keep us out. The best tool is a common tool, so you can open all of your stuff.

Keeping pace with the times.

Modern gadgets have glass, glue, and dozens of different kinds of screws. Your grandfather's wrenches are still great for working on the sink, but they won't get you into the tiny stuff that infiltrates your life.

We designed our tools specifically for opening the latest technology and back them with our Lifetime Guarantee. If anything happens to your kits or bits, we'll replace 'em for as long as you own 'em.



The Pro Tech is our best-selling kit. Loaded with our 64-bit kit and most popular opening tools, you'll have a hard time finding a phone, laptop, or game console you can't open with it.

THE IFIXIT COMMUNITY

WELCOME TO THE COMMUNITY!

Learn to fix any thing with help from pros like Jessa Jones.
ifix.gd/jessa-jones

Join millions of creative problem solvers from around the world.

Jessa Jones, the microbiologist and mom, fished her kid's iPhone out of the toilet and learned how to microsolder in order to fix it. Now she's built the world's best board repair school near her home in upstate New York.

Nobody knows how to fix everything, but everyone knows how to fix something. We need your help to make it easier for more people to find the repair information they need—and in turn, the inspiration to believe in themselves.

Get involved!

Nobody knows how to fix everything,
but everyone knows how to fix something.

Write a repair guide.
